

Access
Increasing Access to Contraceptive

IPPF Goal

All poor marginalized and underserved people in South Asia are able to exercise their rights and have access to SRH information, sexuality education and quality services including family planning.

IPPF Objective

All poor marginalized and underserved people in South Asia are able to exercise their rights and have access to SRH information, sexuality education and quality services including family planning.

FPAN Strategic Direction

Increase access to information, education and services on population, environment and SRH focusing to the poor, marginalized and socially excluded people, including Dalits, ethnic minority, indigenous groups, differently able people, internally displaced people, adolescent, women etc. through expanding gender sensitive and environment friendly education and services in underserved rural urban settings

FPAN Goal

Enable people in general, particularly the poor, marginalized, the socially-excluded and ensure that the underserved are able to exercise their rights to make free and informed choices about sexual and reproductive health, access to population, environment and SRH information, and high quality SRH services, including family planning

FPAN Objective

To increase availability of gender sensitive SRH information and services including family planning in rural setting of FPAN's operational area

- To increase access to gender sensitive SRH information and services, including family planning services to the poor and marginalized people in underserved rural area in FPAN's program districts

Project Title : **Increasing Access to Contraceptives**
Project Number : **2052010005**
Project Duration : **On going**
Reporting period : **January-December 2014**
Beneficiaries : **Women and men**
Location : **All FPAN District Branches& head office**

Justification:

The knowledge of at least one modern method of family planning among the women at reproductive age is almost universal in Nepal. The total demand for family planning is 72.6

percent out of which 43 percent currently married women were satisfied and rest 27percent women still are not getting family planning services. Unmet need for family planning methods is higher among rural women compared with urban women. Similarly, high son preference has extra pressure for the women giving birth to daughters only increasing the chance of her husband to marry another woman

Basic public health facilities are not adequate to meet the unmet need of contraceptives in Nepal. The number of hospitals, health posts, sub-health posts and primary health centres spread across the country has remained unchanged during last few years in public sector. On the other side, number of women entering into reproductive age is growing significantly in each year, which further increases the demand for contraceptives. Therefore, the government has invited openly to NGO and private sector since the early 1990s to complement and supplement its national program to provide contraceptives choice to Nepalese women in order to increase their reproductive health status.

FPAN as a national NGO is working in 42 districts out of 75 districts to provide reproductive health education & services including family planning services to poor, marginalized and underserved people. FPAN alone contributes about 25% to national family planning program. It has more than 2000 service outlets in its operational districts. The estimated number of contraceptives for the year 2014 is estimated as:

The total requirements of FP contraceptives for FPAN in the year 2014 are as follows:

Method	Opening Balance	Expected Consumption	Buffer stock ¹	Total Requirement	Quantity Required to purchase
Condom (PCS)	2598400	16423260	4105815	20529075	17930675
Female Condom	20	9860	2465	12325	12305
Inject able(Vial)	78800	783096	195774	978870	900070
Pills (Cycle)	2880	2568450	428075	2996525	2993645
IUCD (No)	22250	5437	1359	6796	(15454)
Implant (Set)	2650	10613	2653	13263	10613
EC		7050	1763	8813	8813

Project Goal

Contribute to reduce fertility rate and improve maternal and child health in Nepal by increasing access to contraceptives choice

Result/Output

Ensure regular supplies of FP contraceptives in FPAN's operational areas to women, men and young people

Implementation

Result 1: Ensure regular supplies of FP contraceptives in FPAN's operational areas to women, men and young people

¹ Buffer stock is calculated for more than 3 months

Purchase of FP contraceptives from various sources

Following quantities of FP contraceptives (Oral pills, IUCD, male condoms, female condoms, inject tables and emergency contraceptives) is expected to be received from various funding (IPPF, kfw, GoN, UNFPA in 2014:

Methods	Quantities required to purchase	IPPF	Kfw	UNFPA	GoN	Total
Oral pills	2993645	62500	-	800000	2131145	2993645
IUCD	0	0	-	0	-	0
Male Condoms	17930675	0	0	0	17930675	17930675
Female Condoms	12305	0	-	12305	-	12305
Inject able	900070	18000	0	400000	482070	900,070
Implant	10613	0	-	20000	-	20000
Emergency contraceptives	8813	8813	-	0	0	8813

All FP methods (Oral pills, IUCD, male condoms, female condoms, inject tables including emergency contraceptives) required for the year 2014 will be met from existing stock as well as from various sources as mentioned above.

Supply of FP contraceptives

The required FP contraceptives purchased at central warehouse will be supplied to all district branches as required on quarterly basis.

Distribution of FP contraceptives

All FPAN branches will be supplied FP contraceptives to respective SDPs for the distribution to the users to increase contraceptives choice to rural men, women and young people.

Supervision and Monitoring

Central level monitoring team will visit ensure regular supplies of contraceptives at various SDPs of operational districts. Similarly, branch staff will also visit at SDP level on monthly basis for supply of contraceptives as required.
